OUR TEAM

ABOUT US

OUR PHILOSOPHY

Humble in front of mountains, aware of its beauty and its dangers, we are among those who focus our attention on preserving it rather than conquering it.

OUR REASON OF BEING

We are passionate mountaineers, climbers and skiers.

We love the transparency of the ice, the purity of the rock and the silence peaks.

We are humble in front of mountains, and take a fresh look at them, closer to the material and to those who focus their attention on preserving it rather than conquering it.

We are aware of its beauty and its dangers.

We believe the fun is in the accomplishment.

It is from below, where we work, at the foot of Mont Blanc and the Rockies, that we scan the peaks that inspire us to design the best products on the market.

We aspire to become the benchmark brand for mountaineering by offering the products our community is looking for.

We are a brand that cares about the environment, its customers, and the details of its products.

We are bold, creative and responsible.

We get to the point with a subtle blend of purism and daring.

OUR CORPORATE & SOCIAL RESPONSIBILITY

At BLUE ICE, we see ourselves as part of a global community and ecosystem.

We have a responsibility to ourselves, our customers and our business partners to constantly improve our environmental and social impact. We believe it is both a moral and a business imperative that the highest priority of our business is to return a positive long-term value to our stakeholders and the planet.

As such, we are committed to the following actions:

FACILITY & ORGANIZATION

- Passive conception of our head office
- 100% renewable energy supply
- Recycling/reusing of office waste
- Carpooling and bicycle commuting
- Composting all our organic waste
- Using biodegradable cleaning products

PRODUCT & SUPPLY CHAIN

- Locally-sourced raw materials when available
- Local production when possible
- Recycled/upcycled/reused raw materials
- Partnering with responsible vendors
- Long-lifecycle product design
- Resource-efficient shipping and receiving methods

ADVOCACY & PARTNERSHIPS

- Contributing business member of 1% for the Planet
- Contributions and sponsorships of local and regional access and advocacy groups
- Partnering with retailers and organizations with similar ethos
- Partnering with mountain associations and mountain guiding companies with similar values

CRAMPONS

NEW

HARFANG

The most compact and adaptable crampon ever made for ski touring and ski mountaineering.

Materials: UHMWPE and HTPE
40mm main strap, Chromoly steel,
Aluminum

Certification: CE EN 893, UIAA 153

The Harfang crampons have a chromoly steel front rail and aluminum secondary and rear rail, offering an excellent balance between performance, weight, and packability. This patented concept is based on a central main textile strap that connects the front and back rail and allow to mount it in the most suitable position base on the application or the geometry of the boots. The main strap flexible linking system minimizes bulk and offers a real compactness. Designed with a fully automatic binding system it fits all size ski and ski touring boots featuring a toe welt, as well as mountaineering boots with a rigid sole and toe welt.

Stainless Steel tip

NEW

AERO LITE

The lightest weight ice screw on the market with an innovative 3-tooth tip design, ideal for technical mountaineering.

Materials: Aluminum, Stainless steel

Certification: CE EN 568, UIAA 151

The Aero lite uses a stainless steel, 3 tooth tip which allows for easy placement in all conditions. The aluminum body and hanger minimize weight, while the large outer diameter allows for secure placements when using existing holes.

Color-coding easily indicates the length of the screw.

Its features and design make it the ideal ice screw for the most technical routes where lightness and performance are the key.

ICEAXES

FALK

Light and compact
for ski touring and ski
mountaineering.

Materials: Chromoly Steel,
Aluminum, Impact-modified Nylon
Certification: CE/EN 13089, UIAA

The Falk is a great entry-level ice axe for ski mountaineers or classic touring skiers. Built with the same characteristics as our Hummingbird, the Falk offers a very good price / performance ratio. Its head is designed in chromoly steel which guarantees it an effective anchoring and its aluminum handle ensures lightness and strength. It is the ideal tool for novice skiers and mountaineers looking for a technical and lightweight ice axe.

Pick and adze protector included.

AKILA

Lightweight, functional, and durable technical piolet for alpinists or the steep skiing enthusiasts.

Materials: Chromoly Steel, Stainless Steel, Aluminium, Impact-modified Nylon
Certifications: CE/EN 13089, UIAA 152

The Akila is the first Type 1 ice axe to achieve such high level of technicality in the ultralight category. The shape of its chromoly steel ergonomic head is studied for optimal anchoring regardless of the surface. The Akila is quite short, ultralight and compact to be easily stored inside a backpack. It is the ideal tool for hard use and is offered in both a hammer and adze.

Pommel and protectors included.

HUMMINGBIRD

Ultralight and technical ice axe for high-alpine skiing, officially approved for ski mountaineering competitions.

Materials: Titanium, aluminum, impact-modified nylon

Certification: Certifications: CE/EN 13089, UIAA

The Hummingbird is one of the lightest, fastest, toughest ski mountaineering piolets on the market. Its titanium head is as light as aluminum but as solid as steel. Its aluminum shaft promises extreme lightness and solidity.

ICE AXES

BLUEBIRD

Classic, resistant and all-purpose mountaineering ice axe with very good anchoring qualities.

Materials: Stainless steel, aluminum, impact-modified nylon

Certifications: CE/EN 13089, UIAA

The Bluebird ice axe is the most versatile and robust in our range, designed for steep snow or ice slopes. Its 356g intended for the practice of classic alpinism offer very good anchoring qualities. The tip and head of the axe are made of hot-forged stainless steel material that offers ultra high durability and corrosion resistance even with the most intense use.

Pommel and protectors included.

BLACKBIRD

Classic, all-purpose ice axe for general mountaineering and glacier travel.

Materials: Chromoly steel, aluminum, impact-modified nylon
Certifications: CE/EN 13089, UIAA

The Blackbird is a classic and versatile mountaineering ice axe: its head is designed with Chromoly steel, both light and rigid, for effective anchoring.

Built with the same philosophy as the Bluebird, this ice tool is an excellent introductory tool for mountaineers and alpinists.

Pick and adze protector included.

HARNESSES

ADDAX

The lightest padded climbing harness on the market, comfortable and robust.

Materials: UHMW polyethylene, high tenacity PES, aluminum, acetal buckles, EVA foam
Certifications: CE/EN 12277 type C, UIAA

The Addax is extremely versatile and efficient, ideal for rock climbing and mountaineering.

It makes no compromise on the quality of its functional elements. The seamless "Magic Ring" belay loop also offers more lightness and friction resistance. It is a harness for experienced climbers looking for minimum weight without giving up comfort and sturdiness.

CUESTA

The all-around 3 season rock-climbing harness, ideal for trad climbing, sport climbing or long multi-pitch routes.

Materials: High tenacity PES, UHMW polyethylene, aircraft grade aluminum speed buckle, acetal buckles

Certifications: CE EN 12277, UIAA 105

The Cuesta is a multipurpose rock-climbing harness dedicated to confirmed and committed climbers.

The sleek, slim design with laminated waist belt and elasticized leg loops offers complete freedom of movement with a minimal weight (285g). Its tie-in points are reinforced with high tenacity nylon sheet to ensure a really high durability of the harness.

It has four gear loops: 2 front, with rigid insert for ease of clipping and 2 back, flush for backpack compatibility. It is the harness to carry everywhere you go.

CHOUCAS

Ultralight, versatile harness with openable leg loops for glacier approach and alpine climbing.

Materials: UHMW polyethylene, high tenacity PES, polyamide monofilament, aluminum, acetal buckles

Certifications: CE/EN 12277 type C, UIAA

The Choucas harness changed the standard for alpine style harnesses. Made of UHMW Polyethylene, it weighs a paltry 148 g (M) and can be put on with skis or crampons already in place. The ice screw keepers on the leg loops hold two screws in place and accessible. The Choucas harness is the ultimate piece for classic routes, expeditions, and glacier travel.

52 X 26 X 24 CM

YAGI 35L

Versatile and light it has a great carrying comfort specially designed for hikes over several days.

An ultra-functional ski touring or freeride ski backpack designed for seasoned ski mountaineers. With a considerable volume for a ski raid bag, it has all the technical characteristics necessary for your winter races. It has two ski carrying modes including a traditional diagonal mode and an ultra-practical "race" mode allowing you to load or remove the skis without removing the bag from the shoulders.

GLACES BOOK

Required reading for all ice climbers and alpinists.

Soft cover with flaps
264 color pages

STYLE: B002

995 G

210 X 265 MM

FRENCH

Everyone who has ever swung an ice tool, or wanted to learn, has something to gain from this excellent book.

Much more than your basic instructional manual, it presents an in-depth look at the sport of ice climbing, from the earliest alpine ascents to modern drytooling. There is a wealth of information on climbing techniques, equipment, history, and even the science of ice itself. All ice climbers should pay close attention to the authors' innovative "Check and Go" risk reduction method, and

their detailed analysis of the different types of ice formations. Numerous photos, charts, and diagrams illustrate the text, and there are personal accounts written by top ice climbers and alpinists. Suitable for ice climbers of all abilities, as well as guides, instructors, and alpine clubs. Foreword of the English version by Jeff Lowe.

TECHNOLOGIES

To produce the best gear possible, we only use the most durable fabrics and finest technologies, with the highest quality standards, including the following:

CORDURA®

Stylish durability and exceptional strength-to-weight ratio. Exceptionally resistant to tears, scuffs and abrasions. Long-lasting durability.

HIGH TENACITY RIPSTOP NYLON 66

Reinforced nylon making it extra resistant to tearing and ripping, thanks to reinforcement threads in a crosshatch pattern. Woven with coarse, strong warp and filling yarns at intervals so that tears will not spread.

PU COATING

Waterproofing polyurethane (PU) coating or lamination applied on nylon fabric. The PU coating is applied to a single side of the base fabric, thus making it water resistant, light weight, flexible and more resistant to wear-and-tear.

DWR COATING

Durable water repellent (DWR) is a coating added to fabrics to make them water-resistant.

UHMW POLYETHYLENE

Super-strong fiber offering maximum strength combined with minimum weight and incredible softness. 15 times stronger than steel (weight to weight). Resistant to moisture, UV, chemicals.

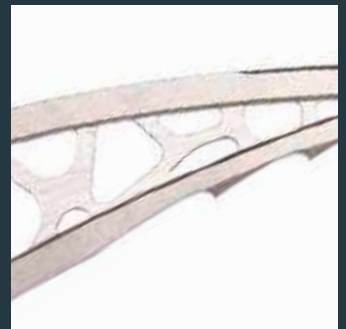

7075-T6 ALUMINUM

Also called "aircraft grade" aluminum, often referred to as the strongest aluminum grade. Alloy 7075 has the strength of many steels, while retaining aluminum's lightweight qualities.

STAINLESS STEEL

Stainless steel's resistance to corrosion and staining, low maintenance, and familiar lustre make it an ideal material for many applications where both the strength of steel and corrosion resistance are required.

TITANIUM

Titanium combine qualities of both steel and aluminum : Resistant to corrosion, it is recognized for its high strength-to-weight ratio. As strong as steel, titanium is 60% denser than aluminium, but more than twice as strong.
