ICONIC BRAND

Zag, located in Chamonix, has become a brand of reference in the all mountain, freeride and touring ski industries. A bold and enthusiastic team remains on the cutting edge of research with the goal of designing increasingly intuitive and high-performing skis.

Today, this high-end brand holds close its values of passion and authenticity, continuing to anticipate the evolving demands of the ski market. Certain skis have become emblematic- like the UBAC for tourers or SLAP for free-tourers without limit. Known for its technical precision and its strong visual identity, ZAG remains the brand of choice for mountain lovers looking for unique slide sensations.

For this new 23.24 season, we've completely redesigned our best-seller range, the UBAC. We are not allowed to fail. The design is strong and we are confident about it. We are bringing modernity and technology to this range, that is sometimes too clean !

And the new 92 under foot width from our SLAP range will allow skiers that are looking for sensations on the slopes to really enjoy the pleasure of carving. »

You are welcome in our office and Lab in Chamonix all winter long to discuss with us.»

Caroline de Wailly, CEO

INNOVATIVE DESIGN

Saint-Lazare, formerly Be-Poles, was born at the beginning of the 2000's and developed in Paris and New York with the aim of : building strong and long-lasting brands, based on strong basis and not on passing fads. We often introduce ourselves as a designs studio rather than as an agency. Creation, guided by our intuition, is at the core of our approach.

We always wanted to think about the brand not as a logo but as stories to live and memories to create. Our job consists of understanding and telling a brand's story with sensitivity, intelligence and experience to allow it to be understood. To conclude, our narrative approach will serve their brand's speech.

Meeting ZAG was the perfect opportunity to combine this approach with the brands and our enthusiasm for mountains. Antoine Ricardou, co-founder of the Studio with Clémentine Larroumet has fasteners is La Clusaz in the Aravis (Alps). Every winter he roams the mountaintops and alpine tracks on his UBAC. This confrontation with ZAG's reality reinforces each year his graphic proposal for the lines he's constantly renewing.

« For the 23.24 collection, ZAG is still focusing on colour and typography.

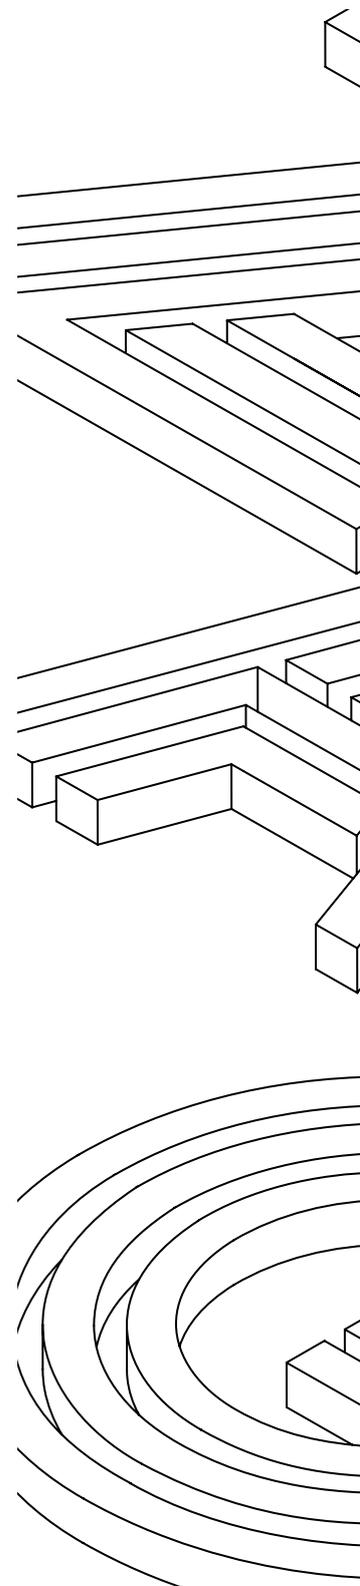

Using colours in stark contrast with the snow's white such as fluorescent or metallic colours is the baseline of the brand.

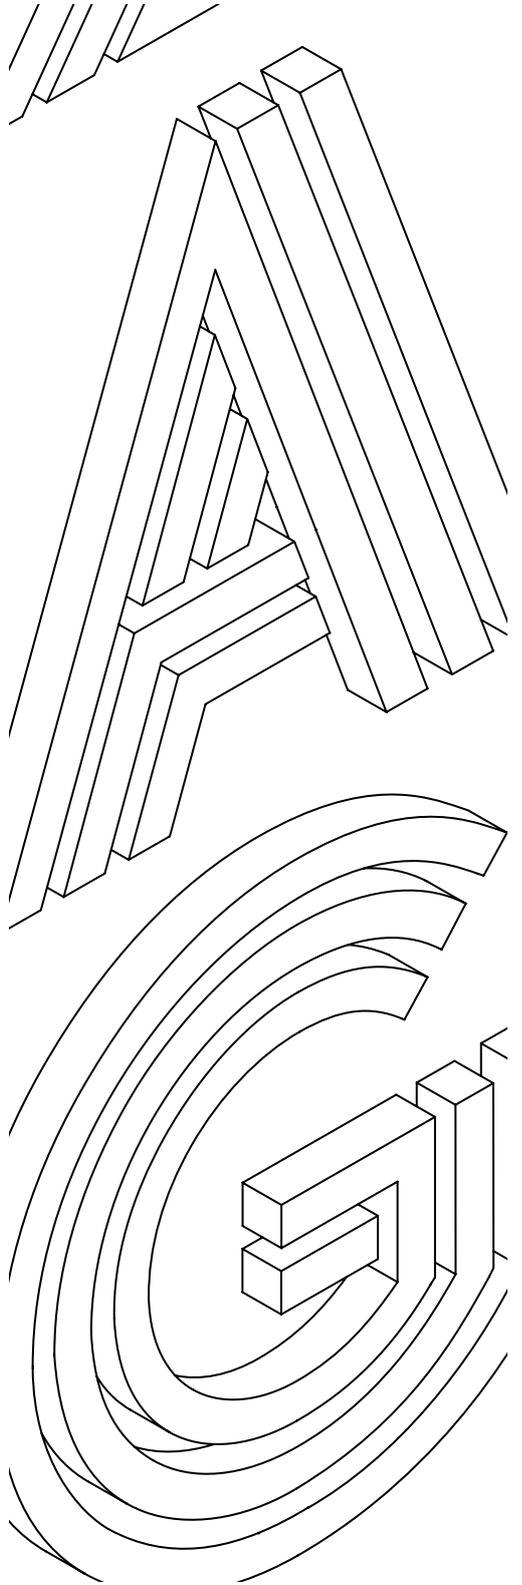

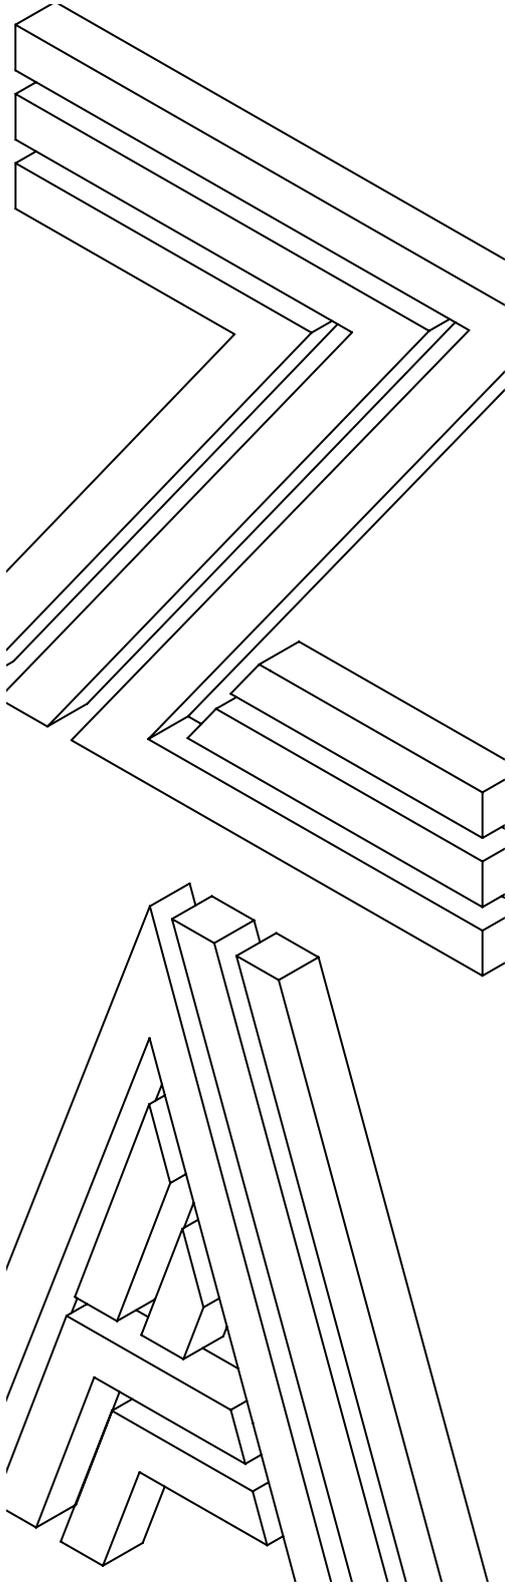

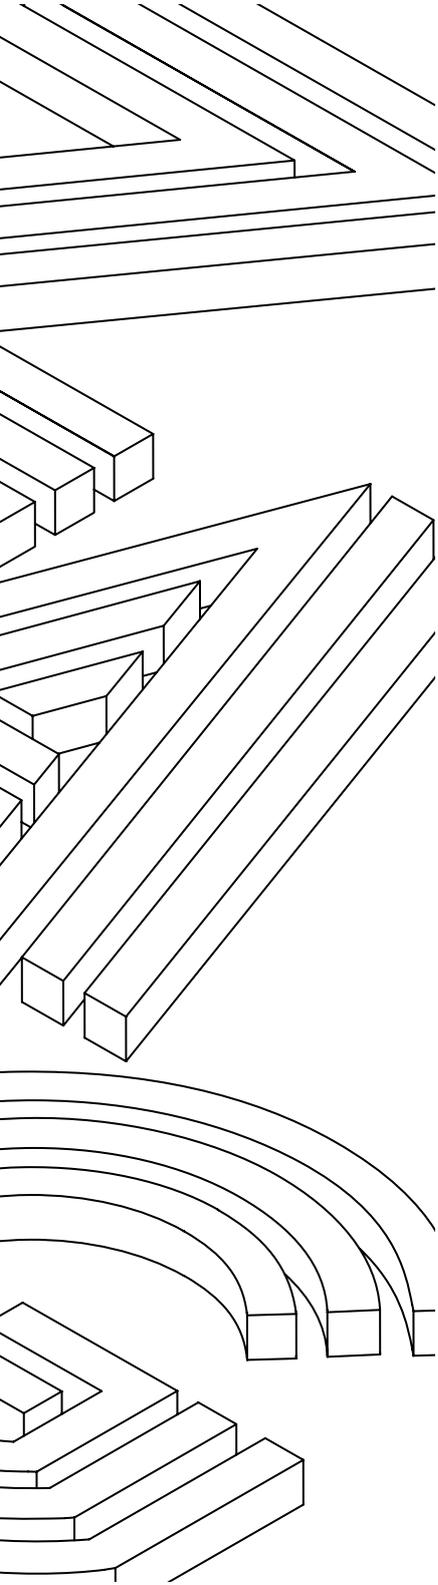

Following these rules, the colours are evolving from seasons to seasons.

This year we also dug inspiration from the geometric work from Marcel Floris and Yusula Kamekura.»

Antoine Ricardou,
SAINT-LAZARE, Paris - NY, Founder & Designer

SAINT-LAZARE
PARIS — NEW YORK

ADVANCED TECHNOLOGY

Our two engineers Bastien Saillard and Paul Chevalot design our skis in the ZAG Lab located in Chamonix with the goal of satisfying the many tastes of our customers. Always hungry to improve, they spend their time studying innovative shapes, materials, and constructions.

“We are compelled to endlessly innovate by creating skis that are increasingly intuitive, comfortable, high performing, and that provide skiers with a unique riding experience. With our concept store at the foot of Grands Montets, our playground is in our backyard. Being so connected with the environment is a true source of inspiration. This is what allows us to create such comfortable and high-performing skis.”

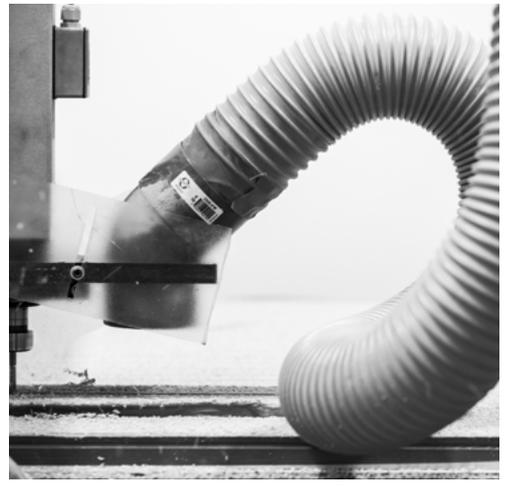

Bastien Saillard, Director of Research and Development

The ZAG LAB allows our engineers to create prototypes in record time, and its prime location in Chamonix lets us test them right away and make improvements accordingly. The team was able to test the skis on all types of snow. They developed a new SLAP 92, a new playful on-piste ski that allows unique carving sensations.

This connection to nature pushes ZAG's R&D team to create products that are respectful to the environment, especially through the use of new materials or designs. The ZAGREEN Program represents ZAG's commitment to sustainability.

ZAG LAB
INSIDE OUR WORKSHOP

ZAGREEN

PROGRAM

Aware that our playground is threatened and that the quality of the air in the valley is more and more an issue of discussion, ZAG has launched the ZAGreen Program. Created in 2017, the aim of this program is to reduce the environmental impact of the ski industry. The actions that will be done will concern the manufacturing of the products, the way we practice skiing and also the daily life in our office. In addition to the measures involving only the company, the aim is to increase awareness among the whole community about the environmental challenge that is the air quality in our valley. ZAGreen is a project that hopes to be heard and also to involve more actors of this beautiful place.

This program's emblem is the snowy owl. This huge white bird conveys the idea of pure natural areas that are the playground of the brand. ZAG associates its brand to this rare and protected bird to achieve its eco-friendly project.

The enrolment of the ski-touring line in the project 1% for the planet also helps ZAG reaching its goal : preserving its playground. In 2021, ZAG redistributed this percentage to Mountain Wilderness. In 2022, we are giving the 1% to Mountain Riders and the cleaning project «Adopt ton spot».

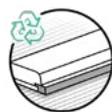

BIO SOURCED RESIN

We have used a resin which is 33% bio-sourced to produce the models ADRETS since 2016. It is mainly composed of oil produced with oil plants.

MATERIALS FROM EUROPE

Constant research to find the most performing and eco-responsible materials.

RECYCLED EDGES

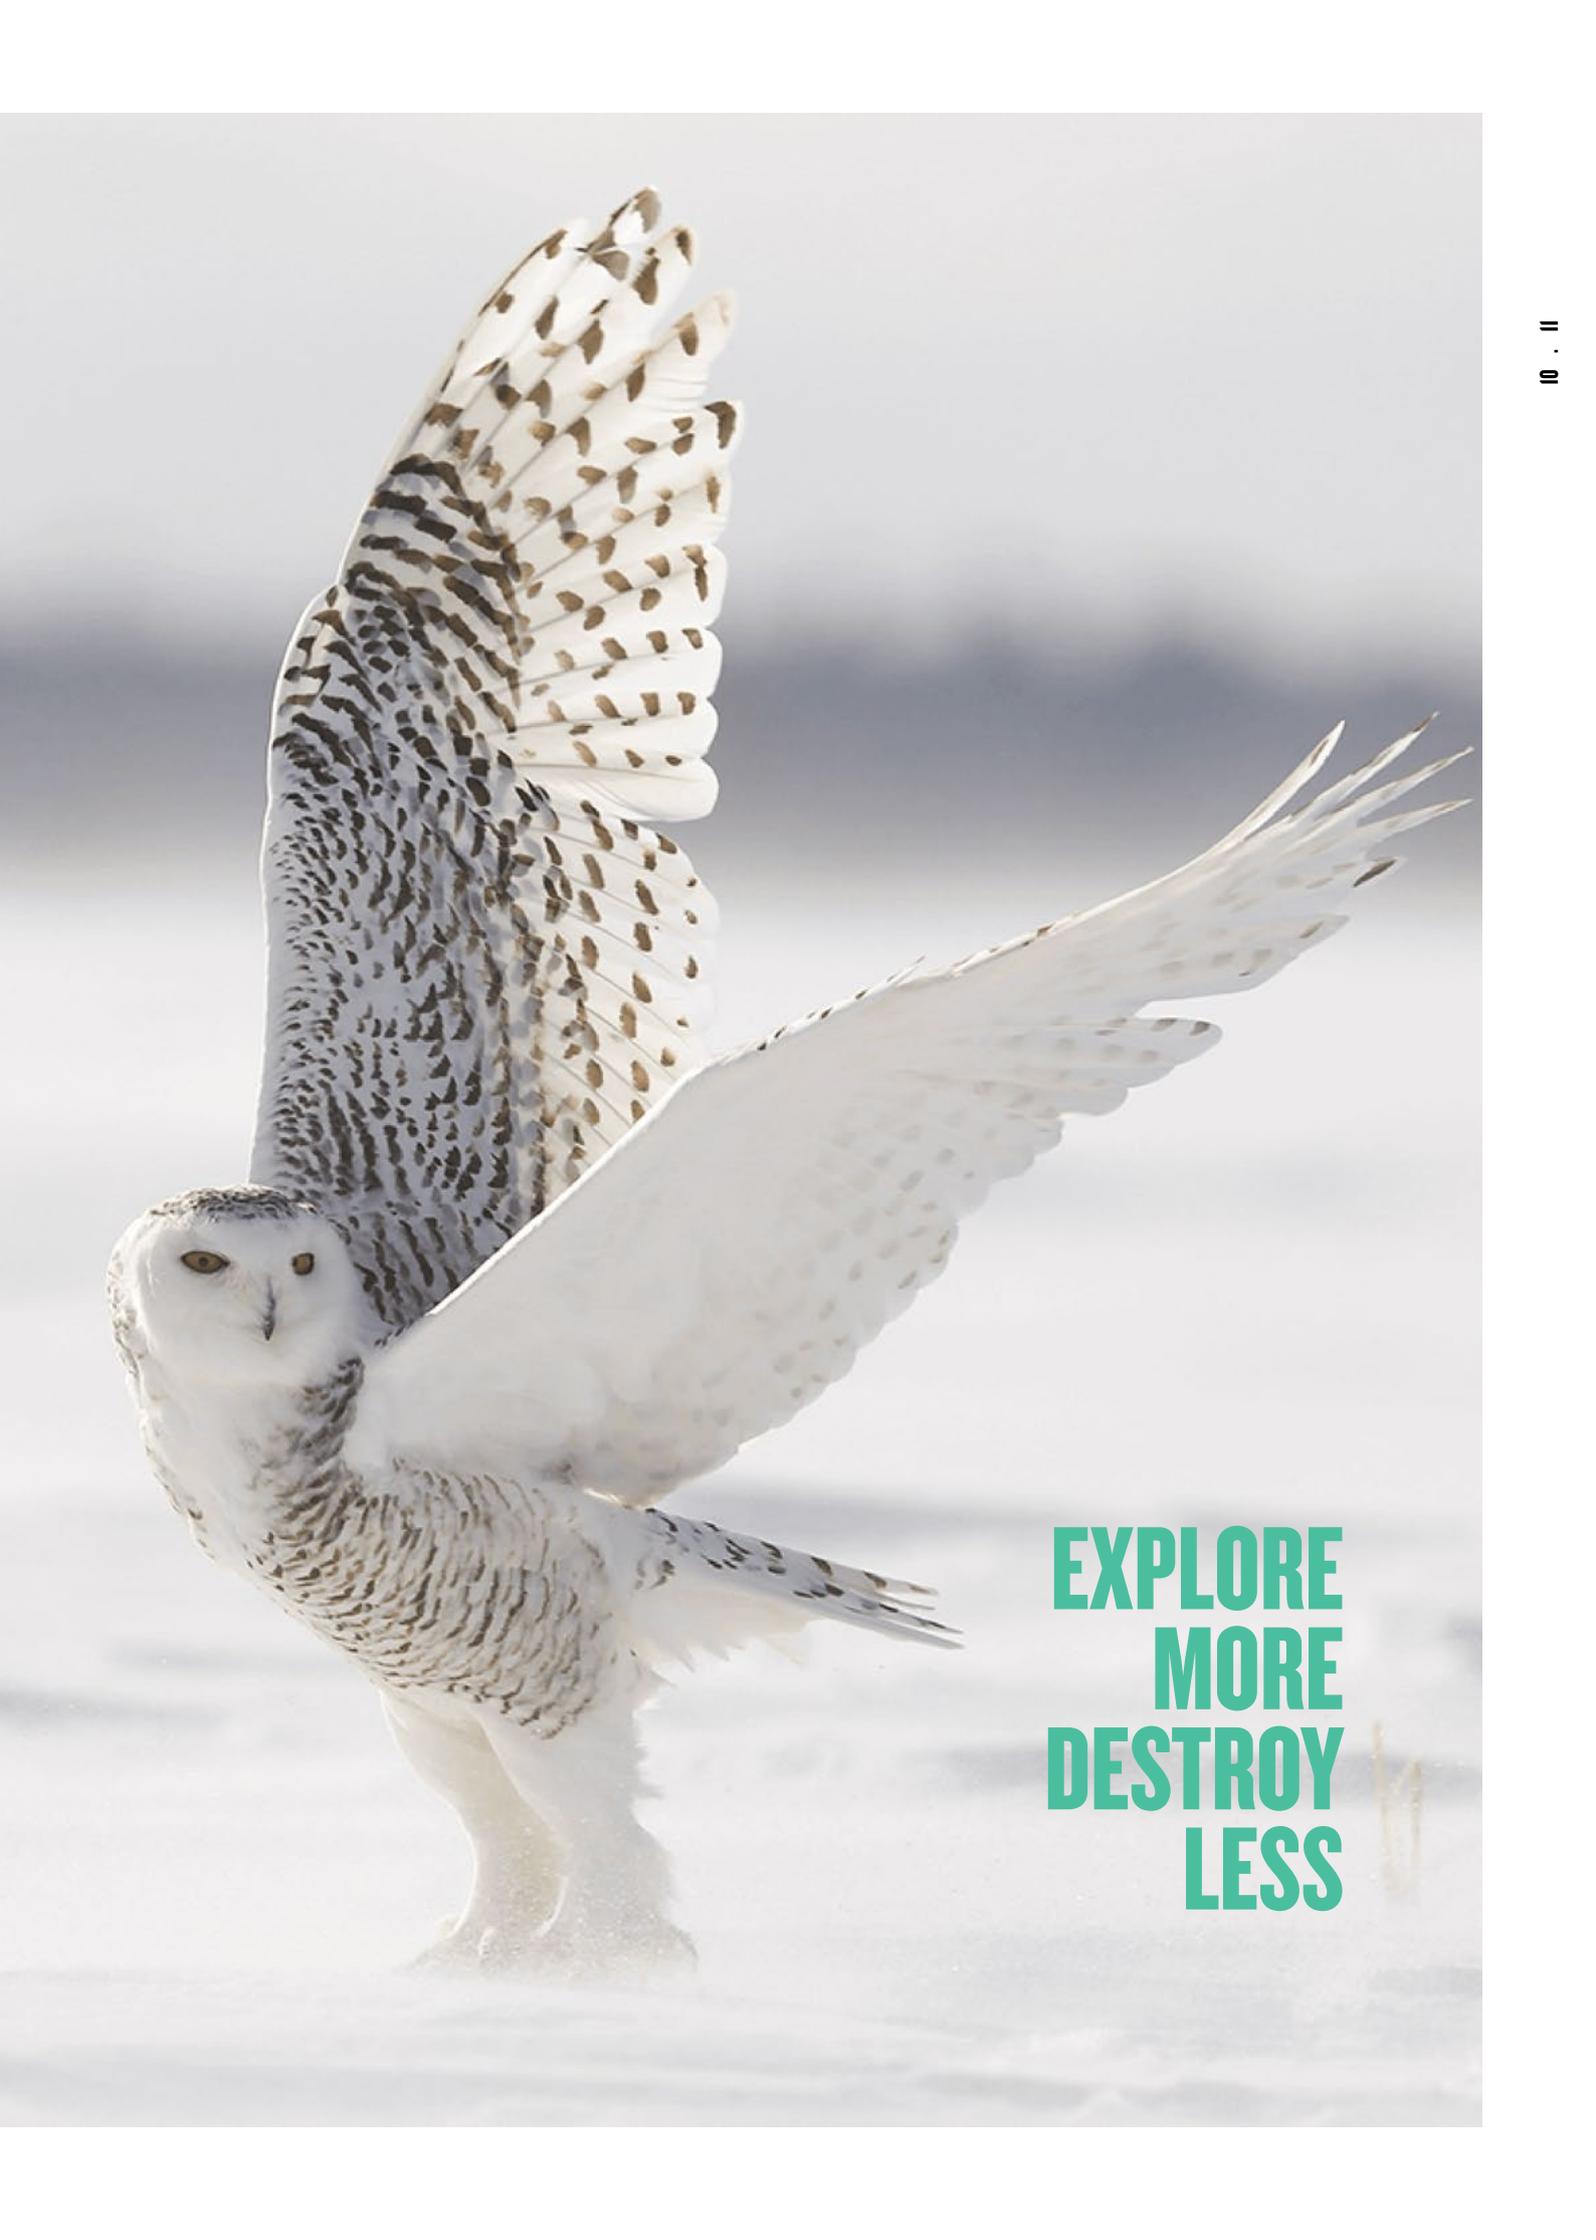

Thick edges on alpine skis on thin edges on ultra-light skis. The edges are from recycled metal.

WOODEN CORE

Quality gain. Ensures the durability. Respects the forests sustainable management.

CONSTRUCTIONS

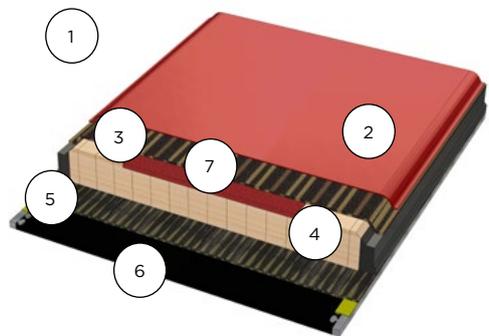

EXTRA LIGHT ADRET

The combination to procure lightness and comfort, while having a rigid construction at the same time in torsion and flexion, with exemplary reliability. The perfect mechanical characteristics for ski touring! This construction is therefore for the touring line. High modulus and high resistance carbon fibers give the skis the lightness and rigidity expected by the demanding hikers. Kevlar fibers absorb vibrations to give an impeccable touch of snow, on the hard or in the powder.

LIGHT UBAC

One goal: to allow skiers to have a light and comfortable ski in all types of snow. This result is achieved through the combination of glass and carbon fibers, making the Touring UBAC skis twice as stiff in torsion. The paulownia wood core allows you to fetch a few extra grams, without affecting the touch of snow and the resistance of the material. ABS sidewalls and high resistance steel edges help the ski to resist the impacts therefore to ski safely!

ADRET

- 1 - 3D structure
- 2 - Polyamide topsheet
- 3 - Carbone/kevlar fibre
- 4 - Paulownia wood core
- 5 - High resistance edges
- 6 - Sintered bases
- 7 - Phenol sheet

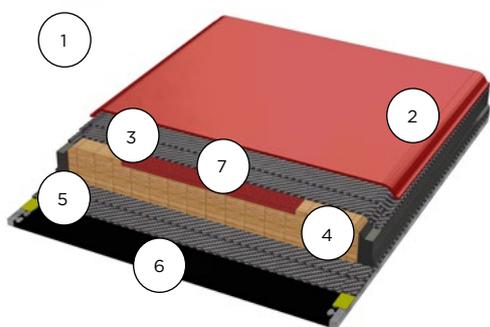

UBAC

- 1 - 3D structure
- 2 - Polyamide topsheet
- 3 - Carbone/kevlar fibre
- 4 - Paulownia wood core
- 5 - High resistance edges
- 6 - Sintered bases
- 7 - Phenol sheet

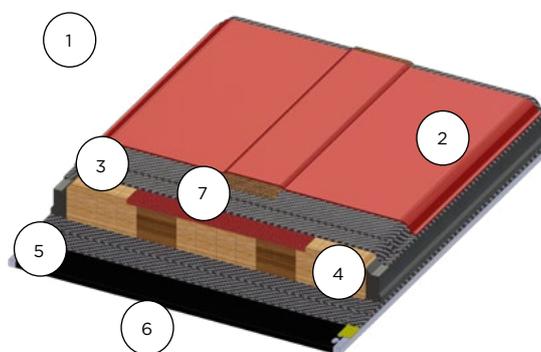

HEAVY DUTY HARFANG

The best compromise between stiffness in flexion and torsion. Composed of a double layer multi-axial fiberglass, the objective is to make skis effective in all types of snow. From the legendary H-112, having proven these to the feet of our best riders, the Heavy Duty construction gives skiers reliability and maximum safety. Lightweight, for more off-road flotation, but rigid, to fully enjoy days of trafolle, this construction makes the ski catchy on hard snow so to link the curves!

HEAVY DUTY LIGHT SLAP

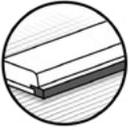

Lightness and power to hit the slopes and the large fields of fresh snow. This construction uses multi-axial fiberglass, increasing the skiability and power by providing stiffness in torsion and flexion. The goal is also to reduce the final weight of these XXL skis, hence the presence of paulownia for 1 lightness, in addition to the poplar for resistance. In the end, 2 this construction makes skis light, playful, stable at high speed 3 and resistant in time that characterize the legendary SLAP's DNA.

- 1 - 3D structure
- 2 - Polyamide topsheet
- 3 - Multi-axial fiber
- 4 - Poplar wood core
- 5 - High resistances edges
- 6 - Sintered bases
- 7 - Phenol sheet

- 1 - 3D structure
- 2 - Polyamide topsheet
- 3 - Multi-axial fiber
- 4 - Paulownia & Poplar wood core
- 5 - High resistances edges
- 6 - Sintered bases
- 7 - Phenol sheet

EDGES

The edges on all skis come from 100% recycled steel. Presenting the best hardness/strength compromise, these edges are highly shock resistant while avoiding breakage, especially off-piste.

SIDEWALLS

The ABS sidewalls are present on the H, SLAP et UBAC ranges. They allow the skis to have increased durability and, because of their rigidity, a better transmission of the power on the edges.

TOPSHEET

In order to make the skis more resistant to repeated outings, ZAG skis are equipped with polyamide topsheet. This transparent and material allows to highlight the colors of the skis, while guaranteeing the highest impact and scratch resistance on the market.

REINFORCING PLATES

In order to guarantee optimal fastening performance, ZAG integrates, in the design of all its models, phenol reinforcements in which the bindings are anchored.

BASE

The sintered base, high molecular weight, present on all the models, have the advantage of being stronger and more resistant to shocks and abrasion than extruded base. This base also has better wax absorption capacity and provides better glide.

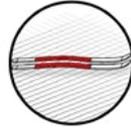

WOOD CORE

Essential part of the skis, providing both the soul and the skiability, the cores present in the skis are composed of different species of wood, poplar and paulownia, according to the desired characteristics for the skis.

STABILITY LINK - LINEN FIBER

Inserting flax fibres allows a maximum vibration absorption.

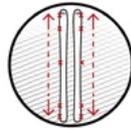

CAMBER

ZAG cambers' are adapted and calibrated according to each range to obtain the right behavior. It influences stability, grip and energy transfer.

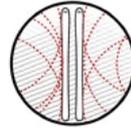

ROCKER

ZAG rockers' are long and progressive which allows an excellent lift off and a very good handling on all types of snow.

5 POINTS SHAPE

Specific shape technic that enables us to increase the handling and playability of the skis.

MULTI-RADIUS SHAPE

Drawing method that allows to vary the radius in several independent areas all along the ski. For instance, it allows to have a very short radius under the feet but greatly enlarged at the ends to improve tolerance in difficult snow.

TORSION

To get an ideal ratio adhesion/comfort, ZAG skis have a resistance to torsion value that evolves according to the widths and programs of the skis.

FLEX

ZAG skis are developed with the most progressive flex curves, always providing soften tip and rebound tail.

RESIN

The resin used in all ZAG models has been rigorously selected for its excellent bonding and mechanical strength properties. As far as possible, ZAG strives to use bio-sourced resins with minimum carbon impact.

FIBERS

In cooperation with its suppliers, ZAG has developed quality weaves adapted to the different constructions in its different ranges. This tailor-made weaving of glass, carbon and or Kevlar fibers, make possible the optimization of weight, strenght and ability of skis.

ADRET 78

TOURING

An excellent compromise between being light and its skiability! The torsional stiffness of this ski increases its grip and creates a sense of security on hard pack on the downs just like on the ups. This is a ski dedicated to the ones who are looking for the ski for steep skiing, for mountaineering or even for high traverses. The ADRET 78 could also be for those who want a performance oriented ski for training purposes, its weight to skiability ratio is unbeatable.

DOUBLE ROCKER

MODERATE FLEX

SHORT CURVE RADIUS

SLAP 112 LADY

FREETOURING / FREERIDE

A ski build that does not go for subtleties for women who do the same once they are deep in the powder! Adapted for female skiers, the Slap 112 Lady is lightweight with surprising maneuverability for a ski with such a build. Imposing rockers both in the front and the rear permit the boldest to express themselves fully in deep snow.

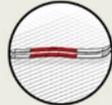

LENGTH (cm)	DIMENSIONS (mm)	RADIUS (m)	WEIGHT (kg)
164	137 / 109 / 126	17	1.740

MEDIUM CURVE RADIUS

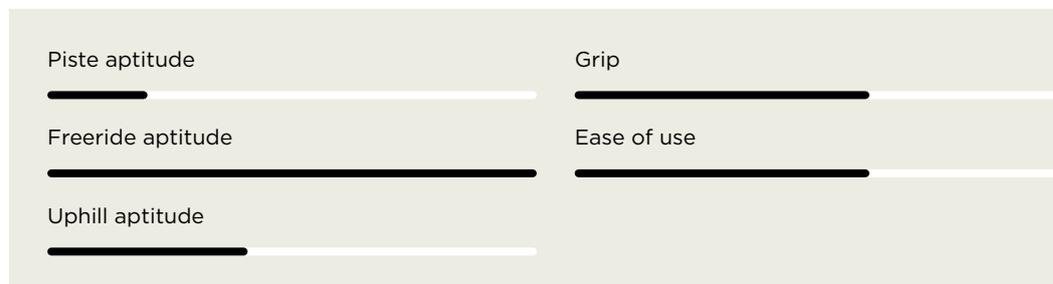

SLAP 112

FREETOURING / FREERIDE

Skiing by Wadek Gorak, winner of the legendary «Verbier Xtreme» stage on the Freeride World Tour. These skis allow you to reach exceptional speeds and cruising in absolute comfort. Lightweight and easy to put on the bag for freerando practice.

LENGTH (cm)	DIMENSIONS (mm)	RADIUS (m)	WEIGHT (kg)
176	138.5 / 111 / 127	19.5	1.840
182	139.5 / 111 / 128.5	20.5	1.970
188	141 / 112 / 130	22	2.010
